

Earthquake Report

September 21-27, 2017

By: Charles P. Watson, California Professional Geologist No. 7818

Magnitude $M \geq 1$	1	2	3+	Total
Regional	10	1	0	11
Previous week	9	2	1	12

■ Many people do not realize we have earthquakes up here. The clean air, clean water and beautiful surrounds seem to the untrained eye and the inexperienced that this is a tranquil place where one's cares are forgotten and the world's troubles can disappear. But this is an area of numerous hazards, some with four legs and others with two, harsh winters and raging floods, and earthquakes and volcanic eruptions. I think we all would prefer dealing with an unpredictable Mother Nature rather than

the perils from urban society. Nevertheless, preparedness is your key to survival. The unexpected can happen, almost guaranteed when you live in the mountains. This is earthquake country. Our seismometers show us that small earthquakes happen every week and every now and again we feel the ground shudder. Some of us remember the earthquakes that really frightened us and people of Lake Almanor can tell you the horrifying stories of what happened to their homes, their lives, when the Canyon Dam M 5.7 earthquake struck on May 23, 2013. Geologist tell us much, much larger earthquakes have occurred in the past. Are you prepared? And what about for that volcanic eruption?
